+91 9701355800

Hyderabad, India 500019

Technical Skills

- **Languages & Tools:** Python, SQL, DataBricks, PySpark, Git, CI/CD
- **Libraries & Frameworks:** Pandas, NumPy, TensorFlow, Scikit-learn
- **Data Engineering:** Data Orchestration, Data Cleansing, Data Transformation, Data Migration, Data Modeling, Data Warehousing
- **Machine Learning**: Neural Networks, Model Development
- **Visualization & Reporting:** Power BI
- **Cloud:** Azure, Azure Data Factory

Education

05/2026

M.Tech:
Artificial Intelligence and Machine Learning
BITS-Pilani
Pilani, India

06/2020

B.Tech:
Computer Science
GITAM University
Visakhapatnam, India

HARSHINI MUMMAREDDY

Summary

Results-driven Senior Data Engineer with about 6 years of experience in designing and developing scalable data ingestion pipelines and cloud-native architectures. Expert in developing automated solutions using Python, SQL, and Spark to handle high-volume datasets across Azure, Databricks. Proven ability to lead complex data initiatives, architect solutions for on-premises, and cloud environments, and manage both batch and streaming data pipelines. Adept at mentoring team members to drive technical excellence, resolving critical performance issues, and delivering reliable data delivery within tight deadlines. Continuously upskilling through certifications in Python, Machine Learning, and Cloud Certifications.

Experience

Value Momentum – Senior Data Engineer

08/2026 – Present

- Building scalable data ingestion pipelines from various sources using Medallion Architecture.

Accenture Solutions – Senior Data Engineer

08/2020 – 08/2026

- Automated complex data ingestion pipelines for 1M+ records using PySpark, significantly reducing manual processing effort and improving data delivery reliability.
- Led end-to-end migration of large-scale data solutions across cloud platforms (Azure**)**, ensuring high success rates and alignment with enterprise data warehouse standards.
- Optimized data delivery and performance by resolving critical bottlenecks in ingestion scripts, reducing processing time and enabling faster insights for business analytics.
- Created Power BI dashboards for data profiling to identify anomalies and validate data quality during migration phases.
- Mentored a team of 3 junior analysts, providing hands-on guidance in scripting, testing, and debugging Python-based migration scripts.
- Performed deep-dive data exploration using SQL to identify anomalies and validate data quality across on-premises and hybrid cloud platforms, ensuring high success rates for critical data initiatives.
- Collaborated with cross-functional teams to standardize data cleansing, transformation, and migration processes.
- Utilized advanced SQL techniques (such as window functions, CTEs, and sub queries) for data wrangling and discovery across heterogeneous sources to generate new business insights
- Designed and implemented robust error-handling and logging mechanisms to improve traceability and minimize downtime in data pipelines.

Certifications

- Python 3 Programming – Coursera
- Data Science Fundamentals – Coursera
- DeepLearning.AI TensorFlow Developer – Coursera
